ELSAG® PLATE HUNTER ALPR
SCHOOL SAFETY SOLUTIONS

KNOW WHEN DANGER IS NEAR YOUR SCHOOL WITH ELSAG® AUTOMATIC LICENSE PLATE READER TECHNOLOGIES

Law enforcement and school officials are focused on increasing school safety. Leonardo's ELSAG® Plate Hunter automatic license plate reader (ALPR) technologies provide several solutions to help identify suspect or law-breaking vehicles on and near campuses.

ELSAG ALPR cameras mounted near entrances, exits and other vulnerable areas read license plates of passing vehicles, capturing the plate number, camera location, date/time of the read and other information. Every plate number is instantaneously compared to white lists or hot lists, and when a suspect vehicle is identified, alarms are broadcast in real time to a command center and officers' in-car computers, for immediate interdiction.

ELSAG® ALPR School Safety Solutions

› White lists – lists can be created for all personnel and students allowed on campus or in restricted areas, alerting officers immediately if it reads a plate not included on the list.

› Hot lists – license plate numbers are compared to lists of suspect plate numbers such as the NCIC list, sex offender lists, and watch lists, alerting officers immediately if the system reads a plate on the list.

› Speed enforcement – ELSAG SpeedEnforcer calculates the speed vehicles are traveling between two fixed points, like the entrance and exit of a school speed zone. When a speeder is identified, officers waiting outside the speed zone are alerted in real time.

› ALPR data storage – all data collected by your ELSAG ALPR systems can be stored in the ELSAG Enterprise Operations Center™ (EOC) for access and analysis at any time, to aid investigations.

LEONARDO

ELSAG® ALPR School Safety Solutions

ELSAG® FIXED PLATE HUNTER ALPR SYSTEM

A network of fixed cameras mounted at entrances and exits, in parking lots and other strategic areas, read license plates on vehicles coming and going, day and night, comparing plate number to white lists and hot lists to identify suspect vehicles.

ELSAG® ENTERPRISE OPERATIONS CENTER (ELSAG EOC)

The ELSAG® EOC data management system houses and manages all of the data collected by your ELSAG ALPR systems. This data can be accessed at any time for data analysis, providing intelligence that can aid your investigations by revealing a vehicle's travel patterns or identifying possible witnesses, for example.
