

ELSAG®

PLATE HUNTER COVERT TOOLBOX

THE COVERT ALPR SYSTEM THAT HOLDS MORE THAN CONSTRUCTION TOOLS

There's nothing remarkable-looking about our diamond-plate pick-up truck toolbox. That makes it the perfect place to conceal our covert automatic license plate reader (ALPR) system that can read plates when parked or moving.

One covert ELSAG® toolbox conceals all system components: cameras, sensor, processing unit, and an independent power source. As vehicles pass by, ALPR cameras read license plates and capture data:

- › License plate number
- › Color photo of the license plate end of the vehicle
- › B/w close-up of the license plate
- › Date and time stamps of the read
- › GPS location of each read

Every license plate is automatically compared to a hot list of suspect vehicles. When there's a match, audio and visual alarms broadcast to a command center and nearby officers for real-time interdiction. The ALPR data

can be stored on an ELSAG Enterprise Operations Center data management server for query and analysis to aid investigations.

Many of our covert ALPR solutions are becoming best practices across the country for missions requiring undercover surveillance. Each solution can easily move to another area or switch to a different vehicle. We continually work with partner agencies to develop creative covert solutions that address their specific needs. Ask about these other ELSAG covert solutions:

- › ELSAG Covert Barrel Camera – construction barrels that sit on roadsides
- › ELSAG Covert Pole Camera – disguised as a utility box with weathered patina
- › ELSAG Covert Cargo Carrier – vehicle rooftop cargo carrier
- › ELSAG Radar Trailers and Variable Message Boards – various speed detection trailers outfitted with covert ALPR systems
