ALPR SYSTEMS

ELSAG VIDEO PLATE HUNTER™ 900 FOR PARKING

THE LOW-COST ALPR SOLUTION FOR PARKING MANAGEMENT EFFICIENCIES

The ELSAG Video Plate Hunter 900 (VPH900™) combines 25 years of experience in optical character and license plate recognition with IP camera technology. This cost-conscious solution saves lot owners and parking management companies time and money.

Our ALPR solutions integrate with new and legacy systems bringing substantial efficiencies to permit validation, lot and garage inventory, fee payment, enforcement, and security systems by reading license plates 24/7 to aid time-limit and permit enforcement, as well as scofflaw detection.
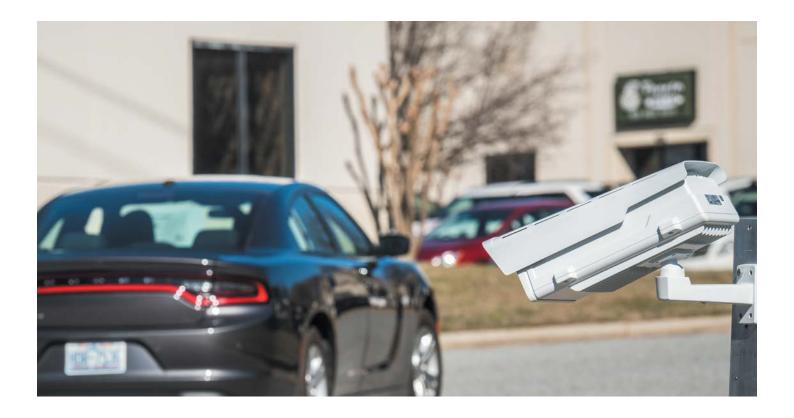

Our ALPR parking management solutions integrate with virtually any parking service vendor, consolidating data from each service into our ELSAG Enterprise Operations Center (ELSAG EOC). This robust data management system allows you to manage all data — regardless of vendor — from one single software program, streamlining daily operations with ease.

For every plate read by a VPH900 camera, the system documents the license plate number, photos of the license plate itself, vehicle make, type and color, plus date and time stamps.

Each license plate number is instantly compared to hotlists and whitelists to identify suspect vehicles and alert enforcement officials in real time, with audible and visual alarms so they can investigate.

- Whitelists contain plate numbers of permitted vehicles.

- Hotlists contain plate numbers of vehicles of interest such as those with expired permits or vehicles belonging to delinquent payers.

LEONARDO

Help your law enforcement improve public safety.

If your local law enforcement already uses ELSAG ALPR, the data collected through the parking system can be shared with them to aid public safety in the community. By sending your ALPR data to their ELSAG EOC data management system, you can help them find suspect vehicles quicker, locate missing persons, and police many other public safety missions.

Let our team work with you to design the best solution to meet your needs.

We take the guesswork out of identifying the proper IP camera to use in your ELSAG VPH900 solution. While a variety of IP cameras will work, including ones you might already own, we have selected IP cameras with various capability levels and price points to deliver a turnkey solution. The camera selection is based on the intended use and environmental factors like light conditions and mounting distance. Along with the selected camera, the solution includes all the necessary components to deploy the system efficiently and effectively, including a robust API for integration with third party parking management and access control products.
